

WEB BROWSER HISTORY

Another area where location data can be found in the device would be from the user created activities such as the web browsing history. When a device user is searching the internet with a mobile device, they may be looking for a nearby business or attraction. Web browser search history can reveal searched locations or search recommendations based on location.

For example, having used MapQuest for directions this data could be contained in the device memory and preserved from forensically imaging the device.

Privacy Settings

The main factor for the recovery of location data from a mobile device will depend on what the user allowed in the settings. In most cases, the device user can turn location off on the device or limit its use to selected features or applications.

DIGITAL EVIDENCE TOOLBOX
